

AwlMatch Color Search System

System Information

Our Services

We understand that finding the perfect color and paint for a yacht can be a challenge. That's why we provide a comprehensive range of services to support you and your customers, from training classes at our Yacht Paint Application Center (YPAC) to on-site seminars, MIXIT Cloud and the convenience of AwlMatch. Your success is our focus.

AWLMATCH®

What is AwlMatch?

AwlMatch is a color searching and measurement system, made up of a portable device linked to the AwlMatch Color App. With AwlMatch you can scan the color of any surface, and instantly find the closest match from the Awlgrip and International (EU) range of solid colors.

The AwlMatch Device

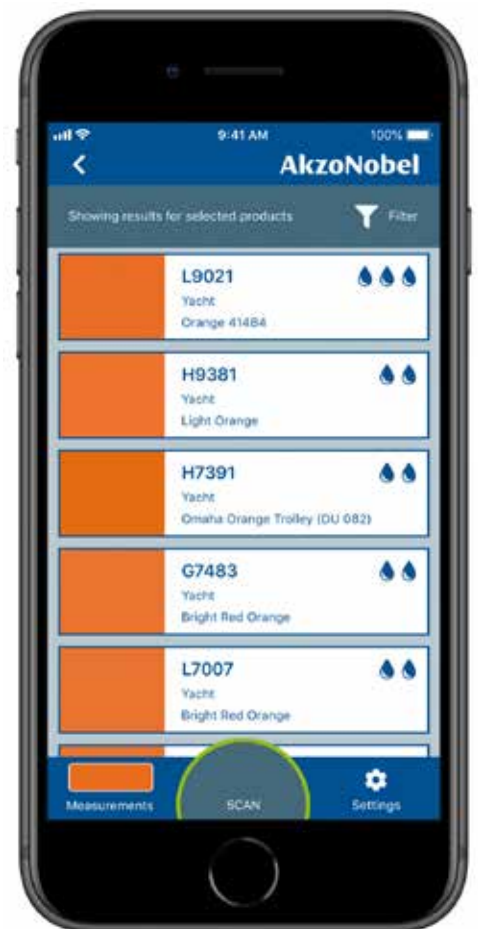

This small portable device is easy to use and can be taken anywhere – the marina, the boatyard, the Awlmix mixing facility or even customer meetings. With the ability to capture colors instantly wherever you go, AwlMatch provides fast, efficient searching to answer customer color requests anywhere.

The AwlMatch Color App

Once you have scanned a color, the AwlMatch Color App can immediately search the AkzoNobel Yacht database, with the ability to save searches for later and share the results with customers and distributors. The AwlMatch Color App allows you to explore colors for inspiration, helping you to narrow down your color choices.

What are the requirements to use the app?

Bluetooth® is required to connect your smartphone to the AwlMatch Device. An internet connection is required to search our color database or forward your search via email or social media, but it is possible to capture colors without internet access, saving them for later review.

How do I connect AwlMatch to my smartphone?

1. Download the app for iOS or Android™

2. Open the app and connect the AwlMatch to your smartphone or tablet via Bluetooth via the following steps:
 - a. In the app tap “connect device”
 - b. Press button on the AwlMatch to wake up device (LED indicator will flash)
 - c. The LED indicator flashes quickly for a few seconds once your smartphone has found the device. Press the button on the device again to confirm connection.
 - d. Calibrate
 - e. Remove cap to reveal sensor – you can screw the cap on the opposite end for safekeeping
3. Quickly scan any color by either pressing “scan” in the app or by clicking on the device
4. On your smartphone the scanned color will appear and matching results will be displayed. The waterdrops indicate ranking of the color match.
5. Save scanned colors
6. Share via text, email and social media and order your paint

AwlMatch Device

Technical specifications
